-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Art Unit: 2621

1. Claims 6, 7, 9, 15-18, and 20-26 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

For examples:

(1) claim 6, line 3, lines 4-5, claim 9, line 1, "the parameters" shows multiple antecedent basis, respectively (see claim 1, line 3, line 5);

(2) claim 15, line 3, lines 4-5, claim 18, line 1, "the parameters" shows multiple antecedent basis, respectively (see claim 10, line 7, lines 10-11);

(3) claim 17, line 1, "the encoded images" shows no clear antecedent basis;

(4) claim 20, line 1, "the encoded images" shows no clear antecedent basis; and

(5) claim 26, line 1, "the encoded images" shows no clear antecedent basis.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-26 are rejected under 35 U.S.C. 102(e) as being anticipated by Alvarez et al (US 2006/0193383 A1).

Alvarez et al discloses a method of operating a video decoding system as shown in Figures 1-3, and the same system, circuit, and method for displaying images on a display as claimed in claims 1-26, comprising the same decoder (i.e., 300 of Figure 3, and see paragraphs [0026], [0027], 1[0032], [0040], [0043], [0061], [0062]) for decoding encoded images and

parameters associated with the images, thereby resulting in decoded images and decoded parameters associated with the decoded images; image buffers (i.e., 110 of Figure 1, memory units in decoder 116, see paragraphs [0026], [0051], [0057]) connected to the decoder and configured to store images decoded by the decoder; parameter buffers (i.e., 316 of Figure 3, and see paragraphs [0040], [0043], [0061], [0062]) connected to the decoder and configured to store parameters associated with the images and decoded by the decoder; display engine (i.e., 118, 120 of Figure 1 and 318 of Figure 3, see paragraphs [0026], [0039], [0040]) connected to the image buffers and the parameter buffers and configured to receive the decoded parameters from the parameter buffers and display the decoded images based on the decoded parameters; wherein the encoded images and parameters associated with the images form portions of data packets, wherein the data packets comprises headers, wherein the headers comprise the parameters, picture layer headers, sequence layer headers, wherein the data packets are associated with first headers and second headers, wherein the first headers comprise a portion of the parameters, and wherein the second headers comprise another portion of the parameters, wherein the first headers comprise picture layer parameters and wherein the second headers comprise sequence layer headers (see paragraphs [0029], [0032], [0040], [0043], [0061]); wherein the encoded images comprise compressed images (see paragraphs [0026], [0027]); and wherein the parameters are encoded with a variable length code, and wherein the decoder decodes the variable length code (see 306 of Figure 3, and see paragraph [0034]).

Art Unit: 2621

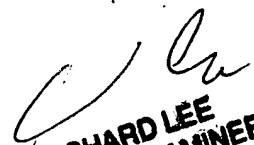

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Savekar et al discloses a buffer descriptor structures for communication between decoder and display manager.

Watkins et al discloses a system and method for using profiles to manage data streams for device verification.

McLaren discloses a HDTV trick play stream derivation for VCR.
